

## **Regloplas AG and orca Temperature Control Systems announce a strategic alliance**

**Improved process control using energy-efficient temperature control units and sophisticated distribution systems.**

**St. Gallen, April 20, 2023.** Regloplas, a leading Swiss manufacturer of innovative and high-quality temperature control units, and Team Orca, a German supplier of modern and maintenance-free distribution systems, announced today their alliance and further cooperation. They will collaborate in the fields of temperature control equipment and distribution solutions, providing significant added value to their customers.

This cooperation combines Regloplas' profound knowledge of sophisticated, high-performance, and energy-saving temperature control equipment with Orca's advanced distribution systems and dual ultrasonic sensor solutions.

«Our two companies' strong market positions and innovative products give our customers an advantage in sustainable process monitoring», says Mirko Jurke, CEO of Jurke Engineering GmbH. «In addition to technical cooperation, we see synergies in international sales and service cooperation for our globally active customers», says Beat Müller, Regloplas' Director of Sales & Marketing.

The strategic alliance will help the two companies pursue a growth plan in their respective markets. The recent successes will be built on by Regloplas' global and long-established partner network, as well as Team orca's consulting and solution know-how.

### **About Regloplas**

Regloplas is a global leader in the production of temperature control equipment and solutions for the plastics, die casting, food, and other temperature-critical industries. The company is a significant contributor to these industries' continued efficiency and quality advancements. Stringent and diverse customer requirements are met by highly specialized teams in development, production, and international sales. Regloplas owns and runs plants in Switzerland, Germany, France, the United States, and China. Additionally, the company collaborates with a global network of independent representatives in over 50 countries. The company, which was founded in 1961, is family-owned and employs 200 employees worldwide.

### **About orca**

Since 2016, the temperature management system orca, created by Jurke Engineering GmbH and enesty GmbH, has been an integral part of the temperature control strategy of many medium-sized businesses, first tiers, and OEMs. Orca is distinguished by its maintenance-free operation and system operability. The non-contact flow measurement with twin ultrasonic sensors is a unique characteristic of the orca-systems, allowing the manifolds to be used error-free even with the most problematic water quality. Orca-systems are now in use in over 50 countries, thanks to a relationship established in 2017 with injection molding machine manufacturer KraussMaffei and collaboration with additional OEMs. Orca has also been represented in Canada, the United States, and Mexico since 2022.
